

Bradford Forster Square

As part of the broader CRSA portfolio, Akona Concepts has played a key role in providing competent teams to deliver critical enhancement schemes. The Bradford Forster Square Station project, which includes the addition of a new platform, aims to increase rail services, reduce delays, and improve connectivity for the city. Akona's involvement demonstrates its commitment to supporting transformative infrastructure projects that enhance rail networks and regional connectivity.

The task

To upgrade the station area as part of the Bradford Station by providing a platform 0 for electric services.

- 21 OLE Foundations
- 35 Structures
- 38 Cantilever registrations
- 850(m) wiring activities

The solution

Provision of construction management, supervisors, linesman to install new OLE equipment across 1km of newly installed OLE.

The result

Current project running live to-date and will continue until 2025 commissioning date.

Summary

Akona Concepts have provided skilled resource which currently meeting project timescales and programme.
